Dear Hiring Manager,

I am excited to apply for the Software Engineering Internship at Microsoft. As a Computer and Communication Engineering student with strong academic standing and hands-on development experience, I am passionate about building scalable, user-centric applications that solve real-world problems.

I have developed full-stack web applications with secure REST APIs, JWT-based authentication, and MongoDB integration. On the frontend, I've worked extensively with React and NextJS to create dynamic, responsive user interfaces. My backend experience includes building scalable Node.js servers and integrating AI models to support features like context-aware chat, dynamic suggestions, and multimodal assistance powered by text and voice inputs.

I am comfortable learning new tools and frameworks quickly and collaborating across domains to deliver high-impact features. I'm particularly drawn to Microsoft's focus on innovation, inclusion, and continuous learning, values I strongly align with.

Thank you for considering my application. I would be thrilled to contribute to Microsoft's mission and grow alongside the talented engineers on your team.

Sincerely,
Arshabrata Bhaumik
